

PRESS RELEASE

Gridspertise Group presents ERALIS Suite, the newly integrated end-to-end modular offering to accelerate the digitalization of electricity grids

- *The new suite combines the expertise of Gridspertise, Aidon and Energyworx to empower utilities in driving the future of the energy transition*
- *The unified portfolio of solutions for grids digitalization is being unveiled at Enlit Europe (Bilbao, 18–20 November)*

Rome, 18 November 2025 – **Gridspertise**, the technology company jointly owned by Enel and CVC Capital Partners, providing advanced digital solutions for the modernization of electricity distribution networks, announces the launch of **ERALIS Suite**, the new integrated offering that unifies and enhances the Group's portfolio of solutions **to manage power grids in a more efficient, resilient and sustainable way**.

ERALIS stands for *Enable, Run, Advance Leveraging Intelligent Solutions*. The suite is designed to guide utilities through three integrated intelligence layers: **Enable**, to build digital infrastructure with smart devices, edge computing and advanced connectivity; **Run**, to manage and control grid operations and assets in real time through intuitive and interoperable interfaces; and **Advance**, to optimize performance through advanced analytics, artificial intelligence and process automation. With its **modular and scalable architecture**, the suite allows for the progressive adoption of its components, reducing implementation time and integration costs while ensuring maximum flexibility according to each operator's level of digital maturity.

In addition to technology, ERALIS brings together services and expert practices to support utilities across every stage of their digital journey, as well as flexible business models — from traditional deployments to Software-as-a-Service and Operations-as-a-Service approaches — to adapt to diverse operational and investment needs.

The new suite represents a significant step forward in Gridspertise's technological offering. Over the past years, the Group has integrated **Aidon**, a leading smart metering company in the Nordic countries, and **Energyworx**, a pioneer in cloud-based energy data management solutions based in the Netherlands.

"By combining Gridspertise's twenty years of experience in smart grids with Aidon's as-a-Service capabilities and Energyworx's advanced data management technologies, ERALIS Suite stands out as a unique proposition" said Sergio Martín Guerrero, Chief Products Officer at Gridspertise. "It integrates cutting-edge modular solutions capable of processing and exploiting data from millions of smart meters and network sensors in real time, turning insight into actionable decisions for metering and grid operations and planning. This capability enables utilities to maximize the utilization of their grid assets, while improving quality of service and operational efficiency in a context of growth of distributed energy resources connected to the grid."

The new ERALIS Suite is being officially presented to the public at **Enlit Europe 2025**, the international event dedicated to the energy landscape, taking place in **Bilbao from 18 to 20 November**. Gridspertise is showcasing live demonstrations of the suite's features and its most

innovative use cases. Further information and additional materials are available at [\[gridspertise.com/eralis\]](https://gridspertise.com/eralis).

Gridspertise Group

Gridspertise Group is the technological partner that delivers intelligent solutions for grid modernization in a flexible and reliable way, developing integrated devices, cloud-edge based solutions and services that enable, manage and optimize smart grids. Set up in 2021 as a carve-out of Enel's experience in the development and large-scale deployment of digital technologies for networks, Gridspertise became an independent company in 2022. In 2023, it acquired Aidon, a leader in smart metering in the Nordic countries, and in 2025 it acquired Energyworx, a pioneer in cloud-based energy data management solutions based in the Netherlands. The three companies consolidate a base of over 200 customers worldwide and more than 20 years of know-how in smart grids and smart metering in the Gridspertise Group, jointly owned by Enel and CVC Capital Partners.
