

# Gridspertise Environmental Policy Manifesto

## Gridspertise Environmental Policy Manifesto

At Gridspertise, we believe that protecting the environment and natural resources is a fundamental value and an essential part of our sustainable growth and of the role we play in the markets where we operate. We are convinced that preventing environmental risks and promoting responsible behavior are key to ensuring well-being and development for present and future generations.

For this reason, every day we are committed to reducing energy consumption and greenhouse gas emissions by promoting efficiency, adopting sustainable technologies, and increasing the use of renewable sources. We manage waste responsibly by reducing unnecessary consumption, encouraging recycling, and supporting the circular use of resources. We adopt a Life Cycle Assessment approach, designing our products to minimize their environmental impact throughout their entire life cycle.

We pay close attention to the use of critical raw materials, seeking alternative solutions and materials with a lower environmental footprint. We ensure transparency in our actions by openly communicating the results achieved.

We actively engage people and partners by raising employee awareness and training, while also adopting supplier selection criteria that include environmental performance.

Our commitment is guided by the principle of continuous improvement: we constantly monitor the effectiveness of our initiatives, updating and strengthening our actions in order to meet our objectives.

We ask all those who work with us to share these values and to act responsibly, always intervening in the presence of behaviors or activities that may put the environment at risk. For us, protecting the environment, together with safeguarding people's health and safety, always takes priority over any other need.
